LANDMARK PATTERNS

KEGEL LANDMARK PATTERNS

SPORT SERIES

RED SQUARE 1040

This oil pattern is flat side-to-side with the oil-only part separated from the buff-only parts in two square-like distances. In bowling "red numbers" means under 200 average; so will you be stuck "in the red" or can you make it "in the black" on the Red Square?

Latitude Ratio Coordinates

22' 1.0 to 1

38' 1.0 to 1

Longitude Ratio Coordinates

Outside Taper 8.3 to 1

Inside Taper 8.3 to 1

Pattern Distance

40 Feet

Pattern Volume

Forward 15.725 mL

Reverse 9.435 mL

Total 25.160 mL

KEGEL LANDMARK PATTERNS

SPORT SERIES

RED SQUARE 1040

Latitude Ratio Coordinates

8'	1.0 to 1
14'	1.0 to 1
22'	1.0 to 1
27'	1.0 to 1
32'	1.0 to 1
38'	1.0 to 1

The 2D Chart above was generated by the Lane Reader showing select tapes and ratios at key distances throughout the oil pattern. USBC Sport Bowling ratios are calculated at 22' and 2' before the end of the oil pattern. **KEGEL KODE Ratios** are determined by the highest Sport Bowling ratio number for that oil pattern.

KEGEL TIP - Generally, the lower the ratios towards the end of the oil pattern, the less guidance of the bowling ball and therefore, the more difficult the oil pattern may play. The higher the ratios are towards the end of the oil pattern, the easier it may play.

Description	Outside Track:Middle	Middle Track:Middle	Inside Track:Middle	Middle: Inside Track	Middle:Middle Track	Middle:Outside Track
Track Zone Ratio	1	1	1	1	1	1

This page shows the **KOSI FLEX LANE MACHINE** program sheet.

The **HEADER** shows the oil pattern distance, the reverse brush drop distance, the amount of lane conditioner applied to the lane, the oil per board setting, and the conditioner type in each tank.

Below that is the **FLEX LANE MACHINE PROGRAM** settings which shows the load structure and number of loads, the oil pump setting if using the multi mic stream feature, the speed of the lane machine, the buffer speed, and the tank choice per load screen.

The **OVERHEAD CHART** on the far right shows where the conditioner is applied on both the forward and reverse pass. The gradient area is a calculation of how the conditioner might bleed off the buffer brush.

The **COMPOSITE GRAPH** at the bottom shows the total amount of conditioner applied to every board along with that volume ratio in different zones.

A good way to think about the composite graph is to envision all the conditioner on the lane being pushed back to the foul line. Once all the conditioner is stacked up, this is what it would look like.

KEGEL TIP - Once the amount of conditioner on the corners (outsides) reaches 300 microliters, an oil pattern begins to become "competitive". Less than that amount the ball might see friction and it could play on the easy side.
